In the light of the applicant's amendment, following final office action has been necessitated:

### ***Specification***

Although there are no major changes to the specification, the applicant, even by new rules is required to submit marked up copy. The new specification is therefore not entered at the monomer. Specification will be considered once marked up copy is received.

### ***Prior Art Disclosure***

With respect to the prior art 07-116303 submitted by the applicant the examiner has indicated that the prior art is about Electrically Driven Prize Winning Device. It is mechanical type patent, which does not contain any polymeric composition. The examiner requests that the applicant double check the patent number of the cited prior art to make sure that it is correct. The prior art has not been considered.

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In the newly amended claims the applicant has stated that the hardener is mixed with the thermosetting binder before it is mixed with the other components. The examiner was not able to find satisfactory support for this new limitation. Therefore the prior art of record is not overcome. Page 7 of the specification to which the applicant refers to mixing temperatures and why they should be lower than 130°C. The passage does not state at all that the curing agent is added to the thermosetting versus the entire composition. It should be pointed out also that the curing agent would cure at given temperatures regardless if it is added to the resin or at the end of the mixing process.

***Claim Rejections - 35 USC § 102***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Gardziella (US 4,918,116).

The discussion of the disclosure of the prior art of Gardziella from paragraph 2 of the previous office action mailed on 2/5/2003 is incorporated here by reference.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
